

# GIVE BACK TO THE EARTH

Recycling organics is a simple act of love for our Earth  
and one another.

Choosing to recycle organics instead of throwing them in the garbage  
means less greenhouse gas going into the atmosphere.

And using compost returns Life to our soils.

Living, healthy soils then do their part: providing nutrient-dense food,  
stronger ecosystems and a more resilient future for all.

It's all about the Circle of Life.

Whether at home, work or play, it can all start with one simple act ...

# COMPOST!
